

Meet Prospero

The Prospero DMX cue light controller is a 3.5" tall rack-mountable device with modular switch panels, allowing the panel to be reconfigured show-to-show. This provides you with the benefits of a custom cue light controller without the cost of a custom faceplate for each new show.

Prospero outputs up to 24 channels of DMX, allowing you to control cue lights, dimmers, relay packs, standalone lights, or even fog machines. Our modular switch panels provide a variety of options for controlling each channel.

Key Features

For the Stage Manager:

- Sturdy toggle switches with long levers for easy use and physical feedback of actuation
- Reconfigurable face panels for custom colors and groupings of switches, allowing the panel to be designed for maximum usability
- Ample 1" label space between switch and LED

For the Electrician:

- DMX output - no proprietary protocols
- Use any DMX-controlled system for your cue lights - no need to buy specialized equipment
- Slide fader, dial fader and 2-toggle options available
- Rack-mountable

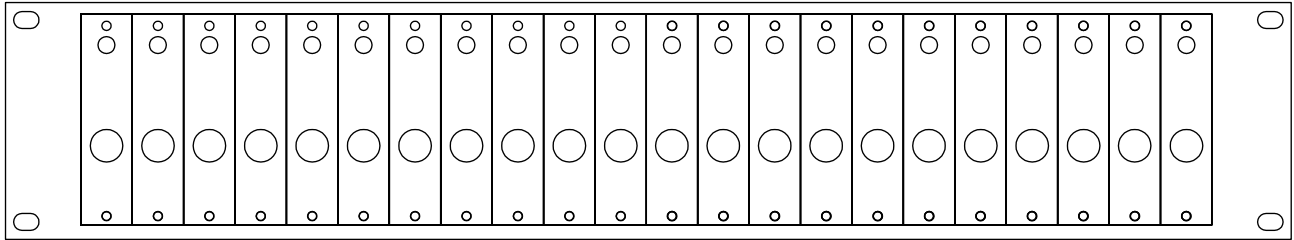

Switch Plate Options:

- 1 toggle switch w/colored LED indicator
- 2 toggle switches w/colored LEDs
- Slide fader
- Dial fader
- Blank plate
- 4-space blank plate

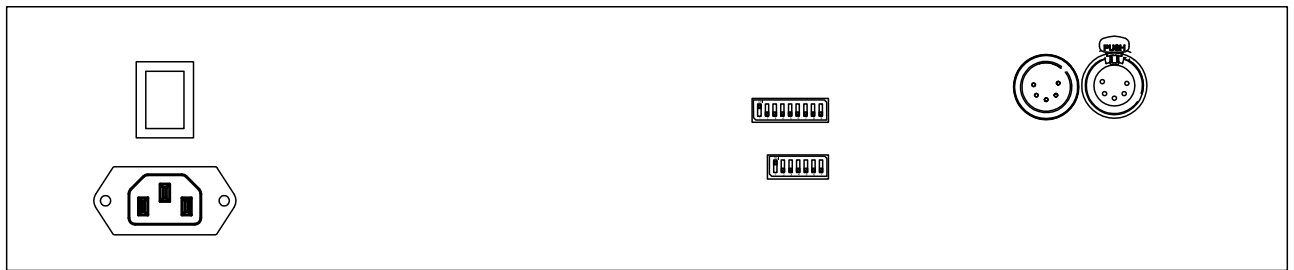

Specs:

- Size: 2RU (19"x3.5") x 8"D
- Weight: 11 lbs.
